

STAR OF THE WEEK

Ryvan, a fairly new player blended in pretty well. A bubbly, fun-loving and friendly student, he wears a smile on him wherever he goes. He is an easy-going person who is well-received and liked by his peers. Where studies is concerned , Ryvan takes his work seriously, assumes accountability and is a diligent student. He is popular among his friends and we are happy to have him with us.

Sekolah Rendah Rafflesia

Week 37 & Week 38 (28/9/2020 - 9/10/2020)

Dear Parents / Guardians,

As the escalating numbers of COVID-19 cases cause uncertainties in us, do be assured that every precautionary measure as stipulated in the SOP is in place to ensure the safety and well-being of all Rafflesians. To avoid unnecessary panic, if classes are to resume online again, due to school closure, we have preempted our students to bring back their books in stages and integrated the use of Google Meet in some of our lessons, as early preparation for any unforeseen eventuality.

The decision on whether to keep your child at home is your prerogative as parents/guardians. To facilitate home revision, we have sent out the scope and exam schedule ahead of time with a copy in the QS Parent Portal as well. Do refer to QS for more information as teachers will be posting the homework there.

If you or your family have travelled to Sabah, Kedah and other infected areas, please be informed that your child(ren) will be on a 14-day quarantine. Stay home and stay safe.

Thank you for your unwavering support and trust in us.

Warmest Regards: Ms Loy (Principal, Sekolah Rendah Rafflesia, Puchong)

KEEP CALM AND WRITE THE ESSAY

Pollution basically means earth contamination. There are many types of pollution such as air, water, land and noise pollution. Pollution isn't something to joke about. It can lead to major environmental issues, the quality of the things every human affects your health and can lead to death.

Air pollution is caused by vehicles that emit a type of gas that can pollute the air. Other than that, the forest gets reduced from natural fires caused by pollution. The pollution is detrimental to your health by air, water, breathing, pollution, the long run, air pollution doesn't only affect your health, but it also affects the other layers.

Water pollution is also detrimental to the earth. It occurs due to the chemical waste produced from factories and the oil spill that occur in the middle of the sea. Water pollution can damage the country's economy because of the lack of fish and other sea life. In the ocean, that is all that we can see at the lake, chemical waste damage their respiratory system.

Such is important to all living things. They need air and water to breathe and drink. If they are polluted, they will die. The earth is polluted, plants cannot grow, birds and animals will die due to the disruption of the food chain. They and their offspring cannot survive, humans would die as well.

We need to stop polluting the earth, but what is better than that? We should switch off machines, conserve water and not make plastic. We need plastic more than we do, but it is not good for the environment. We need to stop polluting the earth, but what is better than that? We should switch off machines, conserve water and not make plastic. We need plastic more than we do, but it is not good for the environment. We need to stop polluting the earth, but what is better than that? We should switch off machines, conserve water and not make plastic. We need plastic more than we do, but it is not good for the environment.

Final Essays - Pollution

Pollution is something introduced into the environment that is dirty, useless or contaminated. There are many types of pollution such as air pollution, noise pollution, water pollution and land pollution. Pollution occurs because of global warming, smoke change, forest fires, and acid rain.

In addition, air pollution is a mixture of solid particles and gases in the air. The pollution can come from solid and liquid particles, and various gases that are suspended in the air. These particles and gases come from sources such as vehicles, factories and power plants. These sources include breathing problems and respiratory diseases such as emphysema. Other than that, water pollution is the liquid water that is naturally contaminated, which is usually a result of them. activities. Sewage, toxic wastes, oil, sewage, mining activities, chemical fertilizers and pesticides cause water pollution to occur. The causes of destruction of aquatic flora and fauna, require efforts on our health and various species of plants and animals which depend upon water for their survival.

Not only that, noise pollution is an environmental issue that is disturbing or unwanted that hinders their and wildlife. The pollution occurs because of traffic noises, construction sites, cutting and night life. It is study to most animal health conditions, including high stress levels, hearing loss and sleep disturbances. Ultimately, land pollution is a result of dumping garbage, waste and other toxins making the land contaminated. The source of this pollution comes from human activities such as littering, mining and construction activities.

In conclusion, we should minimize the usage of plastic bags, reuse or recycle the use of waste materials, we should also avoid throwing sewage and toxic wastes into the water and use public transport more for street cleaners, just use a bicycle or go by walking. There are a lot more ways to prevent pollution and if we do that, we can maintain the environment in an sustainable condition for future generations.

Pollution is a serious problem that humans are facing if we don't work together to solve this problem. There are many types of pollution for example air pollution, water pollution and land pollution.

Water pollution is caused by toxic waste released into rivers from factories. Pollution from the sea can also be one of the factors of water pollution. Plastic is an old from irresponsibly eating big piece of plastic, water pollution can also harm animals when consumed, we are also prone to diseases.

Another disease spread from land pollution is the main cause of air pollution. Water vapor later of air pollution is a result of global warming. Consequently, the smoke from factories can cause acid rain, leading to water pollution. Air pollution can cause many diseases such as lung cancer, asthma, heart's diseases and most commonly, throat irritation.

The primary cause of land pollution is littering. Many people are lazy to throw their rubbish into rubbish bins and just throw their rubbish on the ground. Land pollution can also be caused by over-use of pesticides. Sprink earth cannot be planted on causing shortage of crops.

To sum up all that has been said, we need to do our part to save our only earth. If we don't take action, we would be the next species to go extinct. Together we can turn our planet into a cleaner one, it all starts from YOU.

Final Essay

Pollution is a serious problem that humans are facing if we don't work together to solve this problem. There are many types of pollution for example air pollution, water pollution and land pollution. Pollution occurs because of global warming, smoke change, forest fires, and acid rain.

In addition, air pollution is a mixture of solid particles and gases in the air. The pollution can come from solid and liquid particles, and various gases that are suspended in the air. These particles and gases come from sources such as vehicles, factories and power plants. These sources include breathing problems and respiratory diseases such as emphysema. Other than that, water pollution is the liquid water that is naturally contaminated, which is usually a result of them. activities. Sewage, toxic wastes, oil, sewage, mining activities, chemical fertilizers and pesticides cause water pollution to occur. The causes of destruction of aquatic flora and fauna, require efforts on our health and various species of plants and animals which depend upon water for their survival.

Not only that, noise pollution is an environmental issue that is disturbing or unwanted that hinders their and wildlife. The pollution occurs because of traffic noises, construction sites, cutting and night life. It is study to most animal health conditions, including high stress levels, hearing loss and sleep disturbances. Ultimately, land pollution is a result of dumping garbage, waste and other toxins making the land contaminated. The source of this pollution comes from human activities such as littering, mining and construction activities.

In conclusion, we should minimize the usage of plastic bags, reuse or recycle the use of waste materials, we should also avoid throwing sewage and toxic wastes into the water and use public transport more for street cleaners, just use a bicycle or go by walking. There are a lot more ways to prevent pollution and if we do that, we can maintain the environment in an sustainable condition for future generations.

Final Essay

Pollution is a serious problem and a danger due to toxic materials such as non-biodegradable waste, burning of fossil fuels, and nuclear waste. Air pollution can affect the health and well-being of humans and animals.

Air pollution can cause lung diseases, water pollution can cause death of contaminated and land pollution can result to bad soil and ultimately, overall pollution has similar sources like factories, power plants, vehicles, methane, airplanes, chemicals and spray cans.

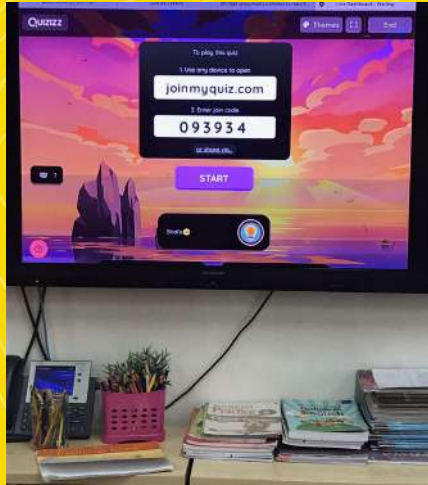

Not only does pollution affect humans but also plants with polluted water and bad air quality. In order to prevent pollution we can use public transport, use recyclable materials and use low electricity. Remember it isn't too late to make a change.

The infographic features two cartoon figures standing on a yellow circular background. A double-headed arrow between them is labeled '1m' and '3 feet'. Above the figures, a blue circle contains the number '5'. The background is orange with a white wave-like shape at the top. The Rafflesia logo is in the top left corner. At the bottom left, the text 'maintain social distancing' is written in white. At the bottom right, there is a sign with a red 'X' over a green virus icon and the text 'STOP COVID-19'.

maintain social distancing

STOP COVID-19

Reminders:

Please ensure you have this prepared for your child(ren) :

- 1) Extra masks in his/her bag.
- 2) Extra disposable cutlery.
- 3) Wet wipes (optional)

We need to ensure masks are on at all times and some of these children tend to soil their masks before the day is done.

Food is an exciting experience for young children but accidentally breaking their plastic forks and spoons may be quite a challenging experience for them. Do prepare the usual cutlery or have some extra ones just in case.

Thank you for your understanding and cooperation.
